

From Source to Tap: A Multi-Barrier Approach to Safe Drinking Water

Source Water Protection

Taking action to protect the watershed and keep contaminants from entering the water source

Drinking Water Treatment

Using processes and techniques to comply with safe drinking water standards in preparing for water distribution

Drinking Water Distribution

Protecting public health is the key factor in constructing water distribution systems, monitoring water quality, and training water system operators

An Informed Public

Providing information about water management and health issues ensures people are informed and have confidence in their drinking water
